

ARE YOUR CUSTOMERS READY FOR A POTS- FREE FUTURE?

Make the Switch to Digitally Connected Life Safety Technology

Traditional phone lines are phasing out¹. Lead the digital transition now by switching your customers to the Connected Life Safety Services (CLSS) Pathway—providing them with enhanced protection through faster and more reliable alarm transmission, along with best-in-class, software-enabled technology that positions your business for growth. They win, you win!

LOWER CUSTOMER COSTS AND INCREASE YOUR RMR

Most customers are paying phone companies up to 25X more per month for two monitored POTS lines vs. cellular service². By helping your customers switch, you become their provider and can start collecting recurring monthly revenue for monitoring via cellular/IP. Give customers a better service that costs them less and puts the phone company's fees in your pocket.

PROVIDE A MORE RELIABLE CONNECTION

POTS lines are a declining infrastructure that is difficult to maintain and prone to outages, especially in inclement weather. Provide your customers with a more reliable cellular connection from their buildings to the monitoring center with dual-sim support and dual-path communication.

DIFFERENTIATE YOUR SERVICE

With CLSS Pathway, you're delivering more than just a best-in-class monitoring service. You're also providing them access to benefits like contextual fire alarm event information to first responders, digital inspection reports, system visibility across sites, and remote diagnostics. This is a premium offering – charge for it!

PAVING THE WAY WITH CLSS PATHWAY

- Dual Listed: UL and ETL listed
- Dual Path: IP and Cellular communication capable
- Dual SIM: Lower inventory costs with a single device that supports both AT&T and Verizon
- Universal Compatibility: Works with any system
- LTE-M on 5G Spectrum: Maximizes speed and coverage. Reduces installation costs by bypassing remote antennas.

Honeywell

JOIN OUR POTS ELIMINATION INITIATIVE TODAY

Making the transition to cutting-edge life safety technology is easy with these simple steps.

1. Log into your CLSS Site Manager to register your Pathway devices

If you do not have an existing account, please register for an account at www.fire.honeywell.com.

2. Configure your Central Station

Select your name in the top right corner > External Accounts > Select your Central Station > Add the 5 digit DNIS and 3 character Prefix. (Contact your Central Station to obtain the DNIS and prefix). Save and close the window.

3. Add your Device

Select Feature Activation > Pathway > Add new device > Follow Steps 1-4 (Create your customer, site and building > Add device serial number, configuration key, and connection details > Confirm your central station details > Save and continue). You will be directed to the Device Details page.

4. Test and confirm

Select Diagnostics > Generate Test Event. A periodic test will be sent to your central station. Once confirmed as successful, you're all set to go!
