

RAISE THE FIRE SAFETY STANDARD WITH THE ENHANCED ENDURANCE SERIES

Smarter safety doesn't have to be complicated. Fire-Lite's innovative, addressable control panels offer more capability and convenience than ever before with the powerful ES-XP Series. The ES-50XP and ES-200XP offer a complete turn-key fire safety solution by combining the dependable ES Series of addressable FACPs with a built-in dual path (IP/cellular), dual SIM (AT&T/Verizon) and dual listed (UL/ETL) 5G LTE-M communicator. This combined solution of fire alarm control panel with built-in Connected Life Safety Services (CLSS) Pathway reduces installation and labor costs while supporting faster, more reliable system monitoring from the central station and cloud.

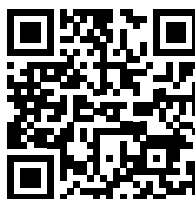

The enhanced ES-XP Series of addressable FACPs can help you tackle more complex projects while providing superior value and flexibility, making every day on the job as easy and predictable as the next.

CLSS SOFTWARE FEATURES

- CLSS Central Station Alerting provides code required transmission of fire alarm control panel events to central monitoring station
- CLSS Site Manager provides a centralized view of all your customer sites so you can monitor device health, streamline service, and manage installations more efficiently
- CLSS Facility Manager helps your customers stay ahead of issues with real-time insights and alerts - making you their go-to partner for reliable, proactive maintenance
- CLSS Compliance Manager takes the manual work out of compliance reporting so you can prove code adherence easily and offer premium services that drive recurring revenue
- CLSS Contextual Information for First Responders shares contextual alarm information from the fire panel with first responder applications enabling a faster and more informed fire service response

ES-XP BENEFITS

- Reduced installation and labor costs with all-in-one solution
- Increases reliability and peace of mind with built-in dual path cellular and IP communication options
- Redundant dual SIM configuration supports both AT&T and Verizon 5G LTE-M networks
- Offers up to 40 seconds faster alarm delivery to the central station vs. dialer capture or legacy POTS communication methods
- Available in 50 point (ES-50XP) and 198 point (ES-200XP) configurations
